AI Powered Environmental Decision Support & Recovery System

Report ID	E2FIX-2026-582393
Generated	29 June 2026 10:07 AM
Location	Guwahati

CONFIDENTIAL ENVIRONMENTAL REPORT

Executive Summary

This report presents an AI-powered environmental assessment based on live air quality, weather conditions and environmental recovery indicators generated by the E2FIX Decision Support System.

Parameter	Value
Location	Guwahati
Environmental Score	75.2/100
Environmental Grade	B
AQI	65
Temperature	27.64 °C
Humidity	85.0 %
Wind Speed	2.83 m/s

Environmental Analysis

This section presents the status of all environmental engines calculated using the E2FIX Hybrid Environmental Assessment Engine.

Environmental Engine	Status
■ Green Engine	Moderate
■ Noise Engine	Low
■ Water Engine	Low
■ Waste Engine	Low
■ Heat Engine	Low

Environmental Observation

The hybrid environmental engine indicates that the Green Index is **Moderate**, Noise Impact is **Low**, Water Stress is **Low**, Waste Pressure is **Low**, and Heat Risk is **Low**. These indicators collectively determine the Environmental Score generated by the E2FIX AI Engine.

Environmental Recovery Dashboard

This section estimates environmental recovery using the E2FIX Carbon Recovery Engine.

Recovery Metric	Value
Current Environmental Score	75.2/100
Projected Score	75.2/100
Carbon Saved	0.00 kg
Carbon Credits	0.00
Recovery Bonus	+0.0
Estimated Revenue	■ 0.00

AI Recovery Assessment

The current environmental score is **75.2**. After implementing recommended recovery measures, the projected environmental score may reach **75.2**. Estimated carbon recovery is **0.00 kg** with approximately **0.00** carbon credits generated.

AI Environmental Recommendations

Based on the live environmental analysis, the E2FIX AI Engine has generated the following recommendations to improve environmental quality and sustainability.

Immediate Actions

Recommendation
• Improve waste segregation.
• Reduce traffic emissions.
• Increase plantation drives.

Medium-Term Actions

Recommendation
• Upgrade recycling infrastructure.
• Install additional AQI sensors.

Long-Term Actions

Recommendation
• Promote carbon neutrality initiatives.
• Expand public transport.

AI Environmental Insight

Current environmental indicators are reasonably balanced. Maintaining sustainable practices can further improve the score.

AI Recovery Prediction

Current Environmental Score : **75.2**

Projected Environmental Score : **75.2**

If the recommended actions are implemented, environmental quality is expected to improve significantly over time.

Environmental Analytics

The following charts summarize the current environmental condition.

Final Environmental Assessment

This section summarizes the overall environmental condition and sustainability assessment generated by the E2FIX AI Decision Support System.

Assessment	Result
Environmental Grade	B
Environmental Score	75.2/100
Sustainability	Good
Environmental Risk	Moderate
Carbon Status	No Recovery Yet

AI Final Remarks

The analysed location has achieved an overall Environmental Grade of **B** with an Environmental Score of **75.2**. The sustainability level is currently classified as **Good**, while the environmental risk remains **Moderate**. Implementation of the recommended recovery actions is expected to improve environmental quality and strengthen long-term sustainability.

SUSTAINABILITY RATING : B

Verification & Report Authentication

This report has been automatically generated by the E2FIX AI Powered Environmental Decision Support & Recovery System.

Verification Item	Details
Report ID	E2FIX-2026-582393
Generated On	29 June 2026 10:07 AM
Generated By	E2FIX v2.0
System	AI Decision Support System
Verification Status	Verified

Digital Verification

This report has been digitally generated by the E2FIX AI Environmental Assessment Engine. No manual modification has been performed after report generation. Electronic verification is available through the QR Code above.

Disclaimer

The environmental analysis presented in this report is generated using publicly available environmental data sources, AI-based assessment models, and recovery estimation algorithms. This report is intended for educational, research, and decision-support purposes only.
